[Live](#) · [GitHub](#)

- Built a single-page music discovery app in vanilla JavaScript with a custom client-side router using the History API
- Integrated the iTunes Search API and TheAudioDB API to display artists, albums, cover art, and track listings
- Implemented live search with debounce and autocomplete, plus loading, empty, and error states
- Added a personal library with save/remove albums, persisted using localStorage
- Designed a responsive, mobile-first UI and deployed it on Vercel
